Art Unit: 1755

This action is in response to applicant's amendment of 19 April 2005. The amendments to the specification have overcome the objections to the disclosure. The amendments to the claims have overcome the 35 USC 112 and art rejections. The indicated allowability of claim 17 is withdrawn upon reconsideration of the teachings in the specification. Rejections based on this reconsideration follow.

Claims 1-16, 18, 19 and 32-42 rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. Subject matter that is critical or essential to the practice of the invention, but not included in the claim(s) is not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976).

The specification raises the question if ceramics having a formula that falls within that of claims 1 and 37 will have the properties that fall within the ranges of claims 1, 14-16, 32, 37 and 38. Page 2, line 22 through page 3, line 3 and the examples indicate that the presence of the dopants and the composition of the dopants are critical for the production of the ceramics having the claimed properties. Page 2, line 22 through page 3, line 3 also indicates that it cannot be predicted which ceramics having the claimed formula will have the properties that fall within the ranges of claims 1, 14-16, 32, 37 and 38. Page 9, lines 20-21 and page 10, lines 9-10 teaches the ratio of the elements in the formula and amount and presence of the dopant affect the electromechanical properties of the ceramic. Also there is a question if the unpoled ceramic, i.e. a ferroelectric, will exhibit a piezoelectric strain constant since a ferroelectric ceramic may not be piezoelectric.
